

**BACHELOR OF COMPUTER SCIENC
SCHOOL OF COMPUTER SCIENCE
BINA NUSANTARA UNIVERSITY
BANDUNG**

ASSESSMENT FORM

Course: COMP6846031-Human and Computer Interaction

Method of Assessment: Project

Semester/Academic Year : Even/2025-2026

Name of Lecturer : Bobby Siswanto
Date : 02 Feb – 13 Jun 2026
Class : Computer Science
Topic : Review II

Group Members :	1. _____
	2. _____
	3. _____
	4. _____
	5. _____
	6. _____
	7. _____

Student Outcomes:

- SO 2 : Able to design, implement, and evaluate a computing-based solution to meet a given set of computing requirements in the context of computer science
- SO 3 : Able to communicate effectively in a variety of professional contexts

Learning Objectives:

- (LObj 2.3) Able to evaluate a computing-based solution to meet a given set of computing requirements in the context of computer science
- (LObj 3.1) Able to identify information required in a variety of professional contexts
- (LObj 3.2) Able to apply appropriate communication technique in a variety of professional contexts

Learning Outcomes :

- LO 1: Describe the concept of interaction design
- LO 2: Use guidelines, principles, models, and framework related with interaction design
- LO 3: Choose the data gathering technique from user to develop successful interaction design
- LO 4: Design the user requirements with interaction styles
- LO 5: Evaluate the user interfaces of interactive software

No	Related LO-LOBJ-SO	Assessment criteria	Weight	Excellent (85 - 100)	Good (75-84)	Average (65-74)	Poor (0 - 64)	Score	(Score x Weight)
1	LO1-LObj3.1-SO3	1.1. Ability to explain the difference between good and poor interaction design	10%	Correct explanation the difference between good and poor interaction design in accordance with guidelines and relevant examples	Correct explanation the difference between good and poor interaction design in accordance with guidelines	Correct explanation the difference between good and poor interaction design	Incorrect explanation the usability of interactive software	100	100x10%= 10
2	LO2-LObj3.1-SO3	2.2 Ability to use models and frameworks related with the interaction design	20%	The models and frameworks are used correctly with relevant examples	The model and framework are used correctly	The model or framework are used correctly	The guidelines, principles are used incorrectly	100	100x20%=20
3	LO3-LObj3.1-SO3	3.1 Ability to use data gathering techniques from user	20%	The data gathering techniques are used correctly and can be combined to get the complete requirement	The data gathering techniques are used correctly to get the requirement	Only can use one data gathering techniques to get the requirement	The data gathering techniques are used incorrectly	100	100x20%=20
4	LO4-LObj3.1-LObj3.2-SO3	4.2 Ability to design the user interface in interactive ways	25%	Able to design the user interfaces of interactive software in accordance with guidelines, principles and theories	Able to design the user interfaces of interactive software in accordance with guidelines	Able to design the user interfaces of interactive software Incomplete	design the user interfaces of interactive software	100	100x25% = 25

No	Related LO-LOBJ-SO	Assessment criteria	Weight	Excellent (85 - 100)	Good (75-84)	Average (65-74)	Poor (0 - 64)	Score	(Score x Weight)
5	LO5-LObj2.3-LObj3.2-SO2-SO3	5.2 Ability to use evaluation method to evaluate the user interface	25%	Able to use and mix different evaluation methods for different purpose	Able to use evaluation methods for different purpose	The evaluation method are used correctly	The evaluation methods are used incorrectly	100	100x25% = 25
Total Score: $\Sigma(\text{Score} \times \text{Weight})$									100

Remarks:

ASSESSMENT METHOD

Create a group of 4-6 people then design an application UI design that is engaged in one of the following economic sectors:

- Agriculture
- Transportation
- *Food and beverages*
- *Finance*
- Education
- *E-commerce*
- *E-Government*
- Health
- Hotel and Tourism

Create a documentation based on the following questions:

1. **(LO 1: 10 poin)** Describe the application you created based on the following criteria:
 - a. Explain in detail the target user you are aiming for, ranging from age group, gender, occupation to other demographic factors that affect UI design!
 - b. Explain the background that is your reason or motivation so you decided to design this application!
 - c. Detail the features possessed by the application that you have designed!
2. **(LO 4 : 20 poin)** Make the initial design of all the UI designs that you have made! Attach your initial design as an answer to this question! Please group the UI designs that have been created based on their features!
3. **(LO 3: 20 poin)** Describe the *data gathering technique* you used to test the initial design you created in No. 2. Give the reason why the technique is used. Then attach the results of the data retrieval !
4. **(LO 5 : 25 poin)** Analyze the data you have obtained in no.3. If there needs to be a change in the UI design, explain what needs to be changed and show data that supports the design change decision! If there is no change, also provide the reason and data that supports that the design that has been made is appropriate !
5. **(LO 2 : 25 points)** Pay attention to the UI design that becomes the *homescreen* or initial display of your application. The display referred to in this question is your latest display after testing in no. 3. Give justification or reason why the *homescreen* is designed like that. ? Use the concepts you've learned and the data you've collected to support your argument!

Note for Lecturers:

This AOL assessment is used to guide Project assignments so that students only **design UI for one application**. AOL's assessment criteria are prepared to ensure that students' analytical skills in the HCI field are built through HCI courses. While *the project* plays a role in developing *soft skills* and the ability of students to present their work in front of many people.

The number of student members can be adjusted according to the conditions in the class, so that groups can be less than 4. But this is highly discouraged as it would be too much for the group concerned.
